30903608	30936010	2005	6	261	Clooncoe	The Pheasantry, Lough Rynn	The Pheasantry, Lough Rynn, Mohill
30903609	30936009	2005	6	262	Farnaght	Gatelodge, Farnaght, Lough Rynn Estate	Gatelodge, Farnaght, Lough Rynn Estate, Mohill
30903610		2005	6	263		Boundary wall and Lych gate, Church of Ireland Graveyard	Boundary wall and Lych gate, Church of Ireland Graveyard, Farnaght
30903611	30936008	2005	6	264	Farnaght	Church of Ireland Church, Farnaght	Church of Ireland Church, Farnaght
30903612	30936006	2005	6	265	Farnaght	Limekiln	Limekiln, Farnaght
30903613	30936003	2005	6	266	Farnaght	Old dispensary	Old Dispensary, Farnaght
30903614		2005	6	267		Former RIC barracks - Farnaght Post Office	Farnaght Post Office, Farnaght
30903618		2005	6	268		Old Mill	Old Mill, Killyvehy
30903702		2005	6	270		Roosky	Roosky Lock
30903703		2005	6	271		Roosky	Roosky Lock/Sluice Gates
30903705	30937002	2005	6	272	Knockadrinan	Two storey Dwelling - J Reynolds	J Reynolds, Johnston's Bridge
30500098		2005	3	274		Water Tower	Water Tower, Summerhill
30500128		2005	3	276		Post Box	Postbox, Lisnagot
30501109	30813040	2005	3	277	Townspark	Post Box	Post Box, Summerhill
30501273		2005	3	278		Presentation House - detached 8 bay 3 storey	Presentation House, Main St.

						former barracks	
30501277		2005	3	279		Presentation House - freestanding 2 bay single storey outbuilding	Presentation House, Main St.
30501060		2005	3	280		Carved Stone Plaque, St. George's Church Grounds	Carved Stone Plaque, St. George's Church Grounds, Church Lane
30501061		2005	3	281		Peyton Tomb, St. George's Church Grounds	Peyton Tomb, St. George's Church Grounds Church Lane
30501063		2005	3	282		Wills Tomb, St. George's Church Ground	Wills Tomb, St. George's Church Grounds, Church Lane
30501007	30813029	2005	3	283	Townspark	St Georges Mausoleum	St Georges Mausoleum, St. Mary's Close
30501255	30813027	2005	3	284	Townspark	End of terrace 3 bay 2 storey house	Raval Clothes Shop & House, Main St.
30501036	30813026	2005	3	285	Townspark	End of terrace 3 bay 2 storey former presbytery	Grafters & House, Main St.
30501033		2005	3	286		Railings to St Mary's Church	Railings to St Mary's Church, Main St.
30501250	30813024	2005	3	287	Townspark	End of terrace 4 bay, 2 storey house	Reynolds Butcher, Moonstone & House, Main St.
30501243	30813021	2005	3	288	Townspark	End of terrace 6 bay 3 storey public house	P. Flynn & Co. Bar, Main St.
30501226		2005	3	289		Teagasc, Bridge Street	Teagasc, Bridge Street
30501019	30813017	2005	3	291	Townspark	Post Office Extension,	Post Office Extension, St.

						St. Georg's Terrace	George's Terrace
30501018	30813017	2005	3	292	Townspark	Post Office, St. George's Terrace	Post Office, St. George's Terrace
30501170		2005	3	293		Hoist, Quayside	Hoist, Quayside
30501006		2005	3	294		Stable Folly, Hatley Manor	Stable Folly, Hatley Manor, St. George's Terrace
30501293	30813044	2005	3	295	Caddagh Glebe	Courthouse	Shannon Lodge
30501008		2005	3	297		Glasshouse, Hatley Manor	Glasshouse, Hatley Manor, St. George's Terrace
30501155		2005	3	298		Old Quay Walls, Quayside	Old Quay Walls, Quayside
30901702	30917001	2005	4	299	Glasdrumman More	Detached 5 bay, 2 storey farmhouse	Glasdrumman House, Drumkeeran
30901703		2005	4	300	Glasdrumman More	Ruins of 7 bay, 2 storey former stables	Glasdrumman House, Drumkeeran
30816005		2006	6	301		Detached 5 bay 3 storey, Sisters Of Mercy	St. Anne's Convent, Convent Lane, Mohill
30816006		2006	6	302		Detached Gabled, Roman Catholic Church	St. Anne's Convent, Convent Lane, Mohill

**Appendix B Recommended Minimum Floor Areas and Standards****Table B-1** Minimum Overall Apartment Floor Areas

<b>One Bedroom</b>	45 sq.m.
<b>Two Bedroom</b>	73 sq.m.
<b>Three Bedroom</b>	90 sq.m.

**Table B-2** Minimum Aggregate Floor Areas for Living/Dining/Kitchen Rooms and Minimum Widths for the Main Living/Dining Rooms

<b>Apartment Type</b>	<b>Width of Living/Dining Area</b>	<b>Aggregate Floor Area of Living/Dining/Kitchen Area</b>
<b>One Bedroom</b>	3.3m.	23 sq.m.
<b>Two Bedrooms</b>	3.6m.	30 sq.m.
<b>Three Bedrooms</b>	3.8m.	34 sq.m.

**Note:** An enclosed (separate) kitchen should have a minimum floor area of 6.5 sq.m. In most cases, the kitchen should have an external window.

**Table B-3** Minimum Bedroom Floor Areas/Widths

<b>Apartment Type</b>	<b>Minimum Width</b>	<b>Minimum Floor Area</b>
<b>Single Bedroom</b>	2.1m.	7.1 sq.m.
<b>Double Bedroom</b>	2.8m.	11.4 sq.m.
<b>Twin Bedroom</b>	2.8m.	13 sq.m.

**Note:** Minimum floor area exclude built-in storage presses

**Table B-4** Minimum Storage Space Requirements

<b>One Bedroom</b>	3 sq.m.
<b>Two Bedroom</b>	6 sq.m.
<b>Three Bedroom</b>	9 sq.m.

**Table B-5** Minimum Floor Areas for Main Apartment Balconies

<b>One Bedroom</b>	5 sq.m.
<b>Two Bedroom</b>	7 sq.m.
<b>Three Bedroom</b>	9 sq.m.

**Appendix C** County Geological Sites of Interest

Theme Site No.	Site Name	IGH Theme - Primary	Principal Characteristics	Summary Description
IGH1-42	The Doons	Karst	Relic Tower Karst	The Doons form the best examples in a group of isolated or vertical sided limestone hills which are interpreted as relic tower karst (similar to the classic tower karst of Guilin, China) which have been modified & truncated by glacial action. They are considered to be the best example of this feature in Ireland.
IGH5-46	Manorhamilton	Precambrian	Garnet-kyanite schist	Spectacular exposures of garnet-kyanite schist. Metamorphic mineral ages have been obtained from the site.
IGH6	Manorhamilton	Mineralogy	Mineralogy	c.f. Zion hill. Under threat
IGH3-33	Corry shore section	Carboniferous - Pliocene Palaeontology	Fossiliferous limestone exposures	Two highly fossiliferous exposures occur on either side of a promontory in the Corry townland. The two outcrops form part of the Bellavally Formation & the lower part of the overlying Carraun Shale Formation.
IGH8	Corry Shore section	Carboniferous - Pliocene Palaeontology	Fossiliferous limestone exposures	Two highly fossiliferous exposures occur on either side of a promontory in the Corry townland. The two outcrops form part of the Bellavally Formation & the lower part of the overlying Carraun Shale Formation.
IGH8	Aghagrania stream section	Lower Carboniferous	Lower Carboniferous Stream section	Type section of the Meenymore Formation
IGH8	Keshcarrigan Quarry	Lower Carboniferous	Lower Carboniferous Limestone	South side of Lough Allen. Dartry/Bricklieve limestone

Theme Site No.	Site Name	IGH Theme - Primary	Principal Characteristics	Summary Description
IGH4-17	Finnalaghta Quarry	Cambrian - Silurian	Lower Palaeozoic D1 Structure	This is the type section for the regionally extensive Finnalaghta Formation & the only exposure of a highly unusual type D1 structure, termed a 'transected monocline'. The exposure provides the most continuous sedimentological section through the turbites which dominate the formation, includes the one very well developed erosive channel margin & fill sequence, as well as an assortment of uni- and bi-directional bottom structures.
IGH8	Tullyoran Quarry	Lower Carboniferous	Waulsortian Limestone Quarry	Waulsortian Limestone Quarry Section
IGH8	Carrickbyrne Quarry	Lower Carboniferous	Arundian Mudmound	Arundian Mudmound
IGH8	Thur Mountain (between Manorhamilton & Lough McNean)	Lower Carboniferous	Bellavally Formation Evaporites	Bellavally Formation. Evaporites
IGH7	Mohill Drumlin Field	Quaternary	Drumlins	Spindle shaped drumlins This drumlin field contains features oriented north-northwest to south-southeast, with the features generally just over 1 kilometre long and 400m-500m wide. Forms part of the NW portion of the 'Drumlin Belt'.
IGH9	Larkfield	Upper Carboniferous	Upper Carboniferous Sandstone	Briscloona Sandstone
IGH15	Creevelea	Economic Geology	(See Summary)	Ruins of Creevelea Iron Works which were in production intermittently from 1641 to 1900. Products include the Ha'penny Bridge Dublin.
IGH14	Dough Mountain	Fluvial/Lacustrine Geomorphology	Gullies	Gullies
IGH14	Glencar Waterfall	Fluvial/Lacustrine Geomorphology	Waterfall	

Theme Site No.	Site Name	IGH Theme - Primary	Principal Characteristics	Summary Description
IGH15	Gortinee	Economic Geology	Iron ore in tholeiitic volcanics. Mined as early as the 16thC; smelted at Dromod and Arigna	
IGH11	Kilroosk Tonalite (east of Ladies Brae)	Igneous Intrusions	Tonalite	NE Ox Mountains. Meta-igneous body: Orthogneiss, intruded into Precambrian Slieve Division. Poorly exposed. Deformed during Grampian Orogeny.
IGH1-32	Largy/Gorteenaguinnell	Karst	Upland karst plateau, dolines	The east Truskmore plateau is an excellent example of upland plateau karst with abundant dolines and vertical shafts developed in an area of upland limestone grassland and bog. The area is considered to be the most extensive area of plateau doline field and contains the highest density of these features in Ireland.
IGH8	Manorhamilton - O'Donnells Rock (Include Wild Cats Hole)	Lower Carboniferous	Lower Carboniferous evaporitic rocks	A section through interesting evaporitic rocks of the Carboniferous exposed here. Forest path.
IGH9	Boleybrack mine workings	Upper Carboniferous	(See Summary)	Old mine workings. Two feet of good coal overlies fireclay. Lackagh Sandstone outcrop at same location.
IGH15	Slieve Anierin	Economic Geology	Iron mining	Iron was mined here some two hundred years ago and the iron ore brought to Drumshambo to be smelted at a place, which today bears the name Furnace. The operation ceased when the timber in the neighborhood the source of fuel for the furnace, became exhausted around the year 1740.
IGH9	Stony River Section/Slieve Anierin	Upper Carboniferous	Iron nodules	An important exposure of part of the Namurian succession occurs in the upper reaches of the Stony River. It is probably the best section of these rocks in Europe. Western side of Slieve Anierin. East side of Lough Allen. Parastratotype Arnsbergian - Ramsbottom. Iron nodules

Theme Site No.	Site Name	IGH Theme - Primary	Principal Characteristics	Summary Description
IGH9	Thur Mountain - Dergvone - Scarden River	Upper Carboniferous	Upper Carboniferous Shale, Siltstone, Sandstone	Base of Namurian: Dergvone shale/ Briscloonagh sst - Gowlaun shale. Continuous section from Lower Carboniferous through Namurian in three sites to the base of the Lackagh Sandstone (Upper Carboniferous).
IGH8	Benbulbin - Gleniff - Glenade complex	Lower Carboniferous	Lower Carboniferous stratigraphy, palaeontology, karst	Whole plateau, includes stratigraphy, palaeontology and structure. Includes Glencar cliffs at Tormore, Gleniff cliffs and Truskmore, Glencar waterfall, Glencarbury barite mines etc
IGH3-43, 7, 8, 14	Benbulbin - Truskmore	Lower Carboniferous	Benbulbin Shales and Bundoran Shales; Scree slopes, alpine landscapes; mass wasting, gullies	Benbulbin Shales and Bundoran Shales exposed in stream and cliff sections. Alpine landscapes (nunataks). Scree slopes. Large slump failures.
IGH12	Doons, The - Colgagh	Mesozoic/ Cenozoic	Tower karst	Tower karst

**Appendix D Guidelines on Flood Risk and Development**

- 1. Development that is sensitive to the effects of flooding will generally not be permitted in flood prone or marginal areas**

*[Preventing such development, where flooding would result in significant hardship, financial losses or costs, will avoid increasing the existing level of risk and will protect the proposed new development from the human (stress and ill-health for example) and financial costs of flood events. It will also eliminate or reduce expenditure on flood protection measures and compensation.]*

- 2. Appropriately designed development, which is not sensitive to the effects of flooding, may be permissible in flood plains provided it does not reduce the flood plain area or otherwise restrict flow across floodplains.**

*[Examples of such development might include park areas, sport pitches, certain types of industry, warehousing, etc. designed to be flood resistant and/or insensitive. Such development should only be permitted provided it incorporates adequate measures to cope with the ever-existent flood risk, e.g. adequate drainage systems, safety measures, emergency response facilities and/or warning and response systems and where it is considered that flooding would not result in significant hardship/financial loss or cost.]*

- 3. Development must so far as is reasonably practicable incorporate the maximum provision to reduce the rate and quantity of runoff. E.g.:-**
  - a. Hard surface areas (car parks, etc.) should be constructed in permeable or semi-permeable materials**
  - b. On site storm water ponds to store and/or attenuate additional runoff from the development should be provided**
  - c. Soak-aways or French drains should be provided to increase infiltration and minimize additional runoff.**

*[Such sustainable design/construction measures are desirable in most areas and essential in floodplains, areas liable to flooding, and areas where the conveyancing capacity of watercourses is marginal. In all of these cases development that reduces the rate of absorption or increases the rate of runoff increases the risk of flooding lands and properties downstream.]*

- 4. For developments adjacent to watercourses of a significant conveyance capacity any structure (including hard landscaping) must be set back from the edge of the watercourse to allow access for channel clearing/maintenance.**

*[A setback of 5m-10m is required depending on the width of the watercourse.]*

- 5. Development consisting of construction of embankments, wide bridge piers, or similar structures will not normally be permitted in or across flood plains or river channels.**

*[Such structures restrict/obstruct flow and increase the risk of flooding to property and land upstream. If it is considered necessary, in exceptional cases, to permit such structures, they should be designed to minimize and/or compensate for any potential negative effects.]*

6. All new development must be designed and constructed to meet the following minimum flood design standards:-
  - a) For Urban areas or where developments (existing, proposed or anticipated) are involved – the 100 year flood.
  - b) For Rural areas or where further developments (existing, proposed or anticipated) are not involved – the 25 year flood
  - c) Along the Coast and Estuaries – the 200 year tide level
  - d) Where streams, open drains or other watercourses are being culverted – the minimum permissible culvert diameter is 900mm. (Access should be provided for maintenance as appropriate.)

*[The application of higher design standards may be appropriate in certain cases where the level of risk and/or uncertainty warrant it e.g. hospitals or other emergency services, main roads, chemical plants, cultural repositories, areas of karst etc.]*

7. A flood impact assessment and proposals for the storage or attenuation of run/off discharges (including foul drains) to ensure the development does not increase the flood risk in the relevant catchment, must accompany applications for Planning Permission for development of areas exceeding 1 Hectare.
8. A certification from a competent person that the development will not contribute to flooding within the relevant catchment must accompany applications for Planning Permission for development of areas of 1 Hectare or less.

*As a general rule, and in the interest of flood risk management developments shall comply with the following requirements as appropriate;*

- a) *Individual developments shall be obliged, in all cases where surface water drainage measures are required, to provide a surface water drainage system separated from the foul drainage system;*
- b) *In the case of one-off rural dwellings or extensions, except in circumstances where an existing surface water drainage system is available to the proposed site for development, and which in the opinion of the Planning Authority has adequate capacity to accommodate the identified surface-water loading, surface water shall be disposed of, in its entirety within the curtilage of the development site by way of suitably sized soak holes;*
- c) *In the case of driveways, drainage measures shall be provided to a detail acceptable to the Planning Authority, so as to avoid run-off from the site to the adjoining public road;*
- d) *For all other greenfield developments, the limitation of surface water run-off to pre-development levels will be required. Where a developer can clearly demonstrate that*

*capacity exists to accommodate run-off levels in excess of Greenfield levels, then the Planning Authority shall give consideration to such proposals on a case-by-case basis;*

- e) In the case of brownfield development, whilst existing surface water drainage measures will be taken into account, some attenuation measures for surface water may be required at the discretion of the Planning Authority in the interests of balanced and sustainable development.*
- f) All new development must be designed and constructed to meet the following minimum flood design standards:- Where streams, open drains or other watercourses are being culverted, the pipework shall be designed to adequately accommodate the maximum anticipated flows. (Access should be provided for maintenance as appropriate.)*

*To give adequate allowance for climate change in designing surface water proposals a multiplication factor of 1.2 shall be applied to all river return periods up to 100 years except in circumstances where the OPW have provided advice specifying the particular multiplication factor for return periods up to 100 years. In the case of rainfall a multiplication factor of 1.1 shall be applied to rainfall intensities to make allowance for climate change requirements.*
